

Applied Business Analytics Practical No. 4

AIM : Business Intelligence Tools for Data Analysis:

Utilize a business intelligence tool (e.g., Tableau, Power BI) to extract insights from a dataset and create interactive visualizations for effective data analysis.

A)LOAD DATASET:<https://www.kaggle.com/datasets/prince7489/e-commerce-sales>

The screenshot shows the Tableau Desktop interface with the 'Ecommerce_Sales_Data_2024_2025' dataset loaded. The sidebar on the left shows the 'Connections' pane with 'Ecommerce_Sales_Data_2024_2025.csv' selected. The main view displays the dataset's fields, including 'Order ID', 'Order Date', 'Customer Name', and 'Region'. The bottom toolbar shows various visualization options like 'Data Source', 'Sales by Product Category', 'Profit by Region', etc.

1 Sales by Product Category

2 Profit by Region

3 Monthly Sales Trend

4 Profit Analysis by Category

5 Sales Distribution

6 Top Products

7 Interactive Visualizations
